

IN THE CLAIMS:

Please cancel claim 1 and 3 without prejudice to or disclaimer of the subject matter recited therein.

Please amend claims 2, 4 and 5, and add new claim 6 as follows:

LISTING OF CURRENT CLAIMS

1. (Canceled)

2. (Original) ~~The display seat for glass and crystal articles of display as claimed in Claim 1;~~ A display seat for glass and crystal articles of display, comprising:

- a) a transparent seat body having a recess on a bottom thereof;
- b) a circuit substrate board inserted into the recess of the seat body; and
- c) a plurality of light emitting diodes connected to the circuit substrate board, whereby the circuit substrate board is connected to a power source to activate the plurality of light emitting diodes;

wherein said seat body has a top portion formed with shallow grooves adapted for receiving round or curved articles of display.

3. (Canceled)

4. (Original) ~~The display seat for glass and crystal articles of display as claimed in Claim 1;~~ A display seat for glass and crystal articles of display, comprising:

- a) a transparent seat body having a recess on a bottom thereof;
- b) a circuit substrate board inserted into the recess of the seat body; and
- c) a plurality of light emitting diodes connected to the circuit board, whereby the circuit substrate board is connected to a power source to activate the plurality of light emitting diodes;

wherein said circuit ~~substrate~~ board ~~substrate~~ has a connecting circuit provided with an electronic control for controlling apparent movement of lights produced by their sequential actuation, and flashing of the lights generated by the light emitting diodes.

5. (Original) ~~The display seat for glass and crystal articles of display as claimed in Claim 1,~~ A display seat for glass and crystal articles of display, comprising:

- a) a transparent seat body having a recess on a bottom thereof;
- b) a circuit substrate board inserted into the recess of the seat body; and
- c) a plurality of light emitting diodes connected to the circuit board, whereby the circuit substrate board is connected to a power source to activate the plurality of light emitting diodes;

wherein said light emitting diodes are mounted below said circuit substrate board to generate light downwardly and toward a shelf therebelow.

6. (New) A display seat for glass and crystal articles of display, comprising:
- a) a transparent seat body having a recess on a bottom thereof, the recess having a plurality of cavities;
 - b) a circuit substrate board inserted into the recess of the seat body; and
 - c) a plurality of light emitting diodes connected to the circuit substrate board, whereby the circuit substrate board is connected to a power source to activate the plurality of light emitting diodes.
